

You and Improved!

Love your skin again.

You love the sun! But years of sun worshipping can damage your skin. Make this year your year to reveal a fresh new look.

FRAXEL DUAL® TREATMENT USES SAFE, NON ABLATIVE FRACTIONAL LASER TECHNOLOGY TO HELP YOUR SKIN ACHIEVE A NATURAL AND BEAUTIFUL GLOW. WHEN THE SUN HAS CHANGED YOUR SKIN; FRAXEL® CAN HELP:

- Erasing of unwanted brown spots
- Reduced fine lines and wrinkles around the eyes
- Smoother, fresher, younger looking skin
- Improved tone and texture

FALLING IN LOVE WITH YOUR SKIN JUST GOT EASIER AT KM SURGICAL

KM Surgical Ltd is Christchurch's leading cosmetic dermatology and laser clinic run by Dr Ken Macdonald, dermatologist and dermatologic surgeon. Dr Madonald is now proud to be able to introduce this latest laser to the clinic. The Fraxel® Dual has both with 1927nm and 1550nm wavelengths to give optimal treatment for pigmentation and skin tightening.

INNOVATIVE LEADING EDGE TECHNOLOGY

Fraxel® Dual is the leading non-ablative system which has taken the industry to the next level by adding a new wavelength (1927nm) that enables us to better address pigmentation and other dyschromias with minimal discomfort. The Fraxel® takes over where IPL can't go giving superior results for pigment removal, skin tightening and scarring. This is a non-ablative laser which gives it appeal as a treatment option with limited side effects and downtime. This laser can be used on all skin types safely and has a patented continuous motion tracking system which delivers safe and uniform treatment results. The Thulium fiber laser 1927nm wave length effectively targets superficial skin layers giving accelerated clearance of pigment. Treatment generally takes 60 minutes or so for the topical anaesthetic to work and then 30 minutes for the Fraxel® treatment. You can put on mineral makeup immediately afterwards and return to work or other activities if you wish. KM Surgical also have the Ultrapulse Encore™ with Deep FX and Active FX. This ablative fractional laser is for heavier lines and is also highly effective for treating scarring from acne, burns and surgery. With this laser the recovery is between 5 and 10 days depending on the degree of treatment used. Patients generally need only one or at the most two treatments and results can be outstanding.
